

IMPORTANT LEGISLATION!

If your air conditioning system uses **R22** refrigerant gas you need to consider your options.

The chances are that if your system was installed prior to 2003 you need to act. As of the end 2009, the use of virgin **R22** is now banned under government legislation. We are now able to offer the use of recycled or drop in replacement products only.

What does this mean to You?

You can be either re-active or pro-active with your actions although being re-active is likely to considerably add to cost and down time in the medium term .

If your system continues to operate correctly you don't need to do anything other than maintain it. If the system does fail or requires attention you need to act as follows :

Options

Virgin **R22** Replacement

Recycled products are on average a massive 4x more expensive than virgin products. This is within a very short period of the legislation coming into play with costs set to increase further during 2010. We do not know by how much, but one thing for sure is that costs will soar as recycled stocks diminish.

An alternative to recycled products will be drop in replacements such as R417A. This is a feasible solution although the drop in replacement will not be as efficient as the virgin product and system performance will reduce, in turn increasing energy consumption and possibly reducing reliability. Alternative drop in replacements are available although there will be a trade off in efficiency or cost of retro-fitting.

Manufacturer Parts Shortage

This is where we believe the real problems lie. In addition to the above, manufacturers are reducing or ceasing production of **R22** equipment spares. This will lead to systems becoming unserviceable within a very short period, irrelevant of **R22** gas alternatives. We have a number of clients who have experienced this towards the end of 2009, and have had no choice but to replace their plant in its entirety .

ADDITIONAL SERVICES WE OFFER

Local Authority & Landlord Planning Packages

Facilities Management & Maintenance

Water Treatments & Risk Assessments

Bespoke Service Level Agreements

Replacement

Why Replace?

- ✓ Reduce Running Costs and carbon footprint by 30 – 50%
- ✓ Improved Plant Performance and reduced footprint
- ✓ Reduced draughts and improved user comfort
- ✓ 36 month Warranties extendable where required
- ✓ Tax efficient Incentives. Enhanced Capital Allowances (ECAs) claimable
- ✓ Extremely reliable and stable solutions engineered to your exact requirement
- ✓ Low cost of ownership
