Air Conditioning Services

Specialist IT Air Conditioning Services

Specialist IT Air Conditioning Services

Air Options have installed many air conditioning solutions throughout the UK. No project is too large or too small, with spend levels ranging from £5k - £250k. Our clients vary from small IT users to large blue chip corporations specialising in both the IT and communications industries.

Air Options offer package items manufactured by Daikin, Liebert Hiross, Mitsubishi and Toshiba, along with bespoke items to suit a specific requirement or application.

Warranty packages are tailored to between 12 and 60 months to suit the customer's specific requirements. This warranty is fully supported by a dedicated 'in house' team offering emergency call out and routine maintenance packages.

Systems are engineered into computer room environments varying in size from 10m² up to a massive 600m², from ground level to 20 storeys high.

Air conditioning solutions are engineered with product redundancy and resilience in mind. Backup systems can be offered with between 50% and 100% of the system design operating as automated 'stand-by'.

We offer a wide range of 'inverter' systems, considerably increasing system performance and efficiency whilst significantly reducing running costs. 'Inverter' products are so efficient and 'green' that the government endorses such installations by allowing companies to claim Enhanced Capital Allowances (ECA's), making this a very tax efficient purchase indeed.

Whatever your requirement, large or small,

Air Options is the only option.
